"AI Humanistic Reinterpretation of Sharia" — Quantitative Text Analysis Report (Full 12-Feature Edition, 5 Models)

A comparative summary of the complete quantitative analysis report (171 pages, Analysis ID 01a10bd9; report generated October 5, 2026). Corpus: 500 documents (AI-generated articles), 761 chunks, 734,447 words, average sentiment 0.21, 26 topics. Compared across 5 Model groups and up to 12 analytics features. Note: topic labels were LLM-generated (gpt-5.6-luna, OpenAI); all other sections are deterministic. All figures below are quoted directly from the report.

1. Corpus Profile & Model Contributions

Parameter	Value	Notes
Documents	500	All "Article Import" (AI-generated articles)
Total chunks	761	Mean 965 words · median 1,140 · min 38 · max 1,481
Total words	734,447	Whitespace-based estimate
Average sentiment	0.21	Mildly positive corpus-wide
Features applied	7 sections in this report	Topics (LDA), Word Frequency (+Keyness), Sentiment, N-Grams, Co-occurrence, Chunking, Framing & Bias
Global LDA choice	K=8 · C_v coherence 0.2876 (Poor) · perplexity 730.84 · stability 0.55	Poor coherence — interpret topics with caution (compare: Contemporary Islam project scored 0.53 "Good" at K=13)
Sources	S1-S500	Source register, Chapter 3

Model	Chunks	Share	Sentiment P/N/Neu	Passive Voice	Avg Bias Score	Complexity
GPT 5.5	200	26.3%	173 / 9 / 18 (87%/5%/9%)	2,296	47.32	14.70
Gemini 3.1 Pro preview	156	20.5%	142 / 4 / 10 (91%/3%/6%)	1,270	32.23	18.48
DeepSeek V4 Pro	154	20.2%	120 / 26 / 8 (78%/17%/5%)	1,153	29.35	17.23
Grok 4.3	151	19.8%	149 / 0 / 2 (99%/0%/1%)	223	29.87	18.15
Claude Opus 4.7	100	13.1%	77 / 13 / 10 (77%/13%/10%)	627	21.43	17.16

Headline stats: GPT 5.5 has by far the highest bias score (47.32 — nearly 1.5× the next model) yet the lowest complexity grade (14.70); Grok writes the most actively-voiced text (only 223 passive constructions) and has zero negative chunks; Claude is the least biased (21.43) and the most critical in sentiment (23% non-positive).

2. Topic Modeling (LDA) — Topics per Model

Prevalence = % of that model’s chunks assigned to the topic. Global K=8 selected with Poor coherence (0.2876) — topic boundaries overlap and labels are LLM-generated; treat as indicative.

Model	#	Topics & Prevalence (sorted by %)
Claude Opus 4.7	3	Pluralism and Islamic Legal Rights 73.49% · Apostasy Laws and Religious Freedom 14.02% · Blasphemy Laws and Free Expression 12.49%
DeepSeek V4 Pro	3	Sharia, Dignity, and Interfaith Pluralism 49.67% · Reconciling Hudud and Human Rights 26.07% · Religious Liberty and Apostasy Law 24.25%
GPT 5.5	6	Minority Rights and Religious Freedom 43.13% · State Institutions and Islamic Rights 23.37% · Women’s Rights in Islamic Law 17.33% · Blasphemy, Speech, and Punishment 10.03% · Apostasy, Conscience, and Belief 3.97% · Human Rights and Sharia Reform 2.16%
Gemini 3.1 Pro preview	6	Human Dignity in Interfaith Law 37.85% · Apostasy Law and Religious Freedom 28.79% · Islamic Pluralism and Interfaith Relations 12.65% · Gender and Minority Rights in Sharia 8.64% · Blasphemy Law and Expression 8.57% · Humanistic Trends in Sharia 3.49%
Grok 4.3	8	Blasphemy and Minority Protections 31.16% · Humanistic Sharia Scholarly Networks 28.97% · Gender Equity Implementation in Sharia 12.28% · Gender Justice and Orientalist Critique 10.47% · Apostasy, Conscience, and Religious Freedom 10.19% · Sectarian Minority Rights and Dignity 4.90% · Apostasy and Blasphemy Legal Distinctions 1.36% · Juristic Interpretation Across Schools 0.68%

How to read: topic labels were regenerated by the LLM in this re-run, so wording differs slightly from the first report (e.g. "Pluralism and Islamic Legal Rights" vs "Islamic Legal Pluralism and Minority Rights") but percentages are identical. Claude & DeepSeek concentrate (3 broad topics); GPT, Gemini, Grok segment (6–8 topics). Grok is the only model with a dedicated "Humanistic Sharia Scholarly Networks" topic near the top (28.97%) and a separate gender-justice pair of topics (~23% combined).

3. Word Frequency & Keyness (G²)

3.1 Top-10 terms per model (raw counts)

Rank	Claude Opus 4.7	DeepSeek V4 Pro	GPT 5.5	Gemini 3.1 Pro preview	Grok 4.3
1	ruling (243)	law (486)	law (1169)	law (818)	interpretation (350)
2	historical (210)	apostasy (421)	ethical (1029)	historical (528)	justice (326)
3	apostasy (207)	ruling (278)	protection (734)	jurisprudence (364)	community (289)
4	law (187)	right (227)	religious (624)	scholar (289)	ruling (285)
5	ethical (159)	state (186)	community (551)	apostasy (245)	principle (240)
6	protection (152)	quran (165)	interpretation (418)	state (179)	religious (206)
7	jurisprudence (139)	ethical (161)	apostasy (349)	right (166)	protection (200)
8	woman (138)	woman (160)	right (324)	protection (138)	historical (194)
9	scholar (123)	historical (155)	dignity (321)	theological (134)	allow (185)
10	punishment (109)	protection (153)	justice (314)	ruling (125)	apostasy (178)

3.2 Keyness — distinctive OVER vs UNDER terms (each model vs rest of corpus; Dunning G², p < 0.001)

Model	OVER terms (hallmarks)	UNDER terms (avoided / rare)
GPT 5.5	hadith · maqāṣid · verse · apostasy · reinterpretation · dhimmi · opinion · punishment (also: quran, major_sunni_school, shafi'i, medina)	ethical · justice · address · community · protection · interpretation · broad · quranic_foundations_sharia (also: belief, focus, disagreement, guidance)
Gemini 3.1 Pro preview	integrate (log-ratio 3.82) · adapt · allow · focus · address · maintain · contrast · ensure (also: justice, external, guidance, principle, respect)	law (G² 416) · argue · state · classical_fiqh · god · classical_jurist (0 occurrences) · maqāṣid (also: human_right, woman, citizenship, political)
Claude Opus 4.7	regard · advocate · law · traditional · historical · complex · quranic_foundations_sharia · universal_declaration_human_rights (also: orientalist_perspective, rigid, artificial_intelligence)	community · question · position · sharī'a · treat · authority · read (0) · quranic (0) · worship · ethical · norm · conscience
DeepSeek V4 Pro	reformist · sharī'a · read · reading · majority_state · maliki_school · position · conversation (also: verse, classical_jurist, juristic, quranic, critique)	justice (G² 179) · law · human_rights_declaration · maintain · society · adapt · community · respect (also: interpretation, individual, security)
Grok 4.3	ethical (G² 547) · treat · moral_responsibility (log-ratio 3.57) · protection · public_welfare · community · mean · coercion (also: disagreement, authority, citizenship)	align (log-ratio -3.85) · allow · verse · dhimmi · like · era · integrate · advocate (also: lens, quranic_foundations_sharia, provide, ensure, adapt)

Key insight: GPT 5.5’s paradox — most raw "ethical" (1,029×) yet relatively UNDER in ethical keyness — is now reinforced by its outlier bias score (47.32): its ethics vocabulary is broad but loaded/advocacy-laden. Gemini avoids classical-fiqh jargon entirely (classical_jurist: 0) and favors procedural-reform verbs (integrate, adapt, ensure). Grok is the most ethical-normative (G² 547 for "ethical") and least textual (verse, dhimmi under-represented).

4. Sentiment & N-Grams

4.1 Sentiment (per-chunk polarity)

Model	Positive	Negative	Neutral	Character
Grok 4.3	149 (98.7%)	0 (0%)	2 (1.3%)	Most homogeneous — zero negative chunks; interpret with caution
Gemini 3.1 Pro preview	142 (91.0%)	4 (2.6%)	10 (6.4%)	Highly positive
GPT 5.5	173 (86.5%)	9 (4.5%)	18 (9.0%)	Positive with the largest neutral share
DeepSeek V4 Pro	120 (77.9%)	26 (16.9%)	8 (5.2%)	Most negative — driven by punishment/death-penalty themes
Claude Opus 4.7	77 (77.0%)	13 (13.0%)	10 (10.0%)	Most critical overall (23% non-positive)

4.2 Top n-gram phrases per model (NPMI-scored)

Model	Distinctive n-grams (weights)
Claude Opus 4.7	declaration_of_human (1.26) · right_in_islām (1.13) · universal_declaration (0.81) · cairo_declaration (0.83) · humanistic_reading (0.71) · muslim-majority_state (0.73)
DeepSeek V4 Pro	minority_and_majority (1.14) · artificial_intelligence (1.00) · declaration_of_human (0.99) · cairo_declaration (0.81) · death_punishment (0.76) · quran_foundation (0.63)
GPT 5.5	declaration_of_human (1.05) · universal_declaration (0.85) · quranic_foundation (0.73) · divine_guidance (0.72) · family_law (0.55) · ethical_responsibility (0.55)
Gemini 3.1 Pro preview	declaration_of_human (1.02) · artificial_intelligence (1.00) · maqāsiḍ_al-sharia (0.93) · ai’s_humanistic (0.80) · universal_declaration (0.80) · quran_foundation (0.72)
Grok 4.3	human_right_declaration (1.32) · declaration_of_human (1.09) · minority_and_majority (1.04) · ai’s_humanistic (0.87) · universal_declaration (0.76) · foundation_text (0.56)

Shared phrase core: "declaration of human (rights)", "universal declaration", "human right", "quran/ic foundation", "historical context" appear in all five models — the UDHR/quranic-foundations bridging vocabulary is universal. Model-specific: Gemini & Grok uniquely surface "ai’s humanistic" (the AI angle); DeepSeek pairs "artificial intelligence" with "death punishment"; GPT adds "divine guidance" and "family law".

5. Co-occurrence & Chunking

5.1 Co-occurrence network (NPMI, 5-token window)

Aspect	Detail
Combined network (20 nodes · 11 links)	protection_life_intellect_lineage · punishment · mu'tazila · repent · theological_school · kalām · property · objective_law · universal_declaration_human_rights · apostasy · non_compulsion · article_18 · cairo_declaration · minority · medina · karāmah · dignity
Conceptual axis	maqāṣid (life-intellect-lineage-property) ↔ international human rights (UDHR / Article 18) ↔ apostasy-blasphemy-punishment debate ↔ theology (kalām, mu'tazila)
Strongest pairs (Claude)	darar-harm (0.62) · discretionary_punishment-ta'zīr (0.62) · dīn_compulsion-non_compulsion (0.57) · property-maqāṣid tuple (0.56) · maslaha-public_welfare (0.54)
Strongest pairs (Gemini)	maqasid_al_sharia_high-objective_law (0.59) · millet_system-ottoman (0.56) · justice_ʿadl-mercy_rahma (0.56) · offender-repent (0.56)
Strongest pairs (GPT / Grok / DeepSeek)	GPT: modern_human_right-UDHR (0.39) · dignity-karāmah (0.32) — conceptual rather than terminological; Grok: human_rights_declaration-UDHR (0.50) · external-internal (0.33); DeepSeek: property-maqāṣid (0.54) · istitāba-repent (0.47)

5.2 Chunking — dominant noun phrases per model

Model	Top Noun Phrases (counts)	Signature Prepositional Phrases
GPT 5.5	sharia (1,138) · justice (556) · freedom (318) · conscience (282) · the qur'an (265) · dignity (242) · apostasy (235) · protection (212) · fiqh (189)	of_sharia (101) · of_belief (47) · of_conscience (37)
Gemini 3.1 Pro preview	sharia (1,135) · islamic_law (378) · human_rights (168) · freedom (150) · apostasy (125) · ai (110) · non (107) · ridda (104) · the_quran (101)	of_sharia (398!) · of_islamic_law (96) · of_belief (39)
DeepSeek V4 Pro	sharia (683) · apostasy (274) · human_rights (126) · non (126) · women (111) · freedom (101) · the_quran (89) · the_death_penalty (79) · justice (77)	of_sharia (90) · for_apostasy (44) · of_conscience (17)
Grok 4.3	sharia (717) · justice (136) · scholars (122) · belief (100) · communities (96) · apostasy (76) · the_quran (64) · dignity (60) · equity (59)	of_sharia (33) · of_belief (30) · on_expression (13)
Claude Opus 4.7	sharia (361) · human_rights (202) · apostasy (139) · fiqh (110) · freedom (108) · non (105) · belief (85) · conscience (75) · women (64)	of_sharia (26) · of_belief (21) · of_worship (10)

Reading: GPT & Gemini lean on "sharia" hardest (1,100+ mentions each); Gemini's "of_sharia" (398) shows a legal-instrument style; GPT's top-5 is value-abstract (justice, freedom, conscience, dignity); DeepSeek keeps punishment concrete (death penalty 79); Claude's profile is the most thematically even and the only one where "fiqh" ranks top-5.

6. Framing & Bias Detection

Metric	GPT 5.5	Gemini 3.1 Pro preview	DeepSeek V4 Pro	Grok 4.3	Claude Opus 4.7
Total passive voice	2,296	1,270	1,153	223	627
Passive ratio	0.17	0.21	0.19	0.03	0.12
Total hedging	249	87	138	120	140
Total intensifiers	44	75	54	2	32
Total loaded terms	1,047	322	363	512	198
Avg complexity grade	14.70	18.48	17.23	18.15	17.16
Avg bias score (per 1k words)	47.32	32.23	29.35	29.87	21.43
Total evidence terms	1,340	484	555	634	370

Reading	Detail
GPT 5.5 — outlier	Bias score 47.32 is 1.5–2.2× every other model, driven by 1,047 loaded terms and 2,296 passive constructions across its 200 chunks — assertive advocacy in bulk, wrapped in the simplest prose (complexity 14.70)
Gemini — formal heavy	Highest passive ratio (0.21) and complexity (18.48): formal, agency-distant academic register
DeepSeek — hedged-doctrinal	Balanced hedging (138) with strong passive voice; moderate bias
Grok — active but loaded	Almost no passive voice (223; ratio 0.03) and virtually zero intensifiers (2), yet the 2nd-highest loaded-term count (512) — direct declarative claims, few qualifiers
Claude — least biased	Lowest bias (21.43) and lowest loaded terms (198); most even, hedged profile (140 hedges on only 100 chunks)

7. Per-Model Character Summary (Synthesis)

Model	Analytical Character	Distinctive Strength	Watch Out For
GPT 5.5	Prolific textual-normative synthesizer (200 chunks): minority rights, state institutions, women’s rights; richest raw vocabulary	Broadest thematic spread with 6 topics; most n-gram evidence terms (1,340); lowest complexity (most accessible prose)	Outlier bias score (47.32): 1,047 loaded terms + 2,296 passives; ethics vocabulary broad but advocacy-laden (ethically UNDER in keyness)
Gemini 3.1 Pro preview	Historical-comparative jurist: dignity-in-interfaith-law focus; procedural reform lexicon (integrate, adapt, ensure)	Strongest legal-instrument phrasing (of_sharia 398); unique AI-angle n-grams (ai’s humanistic); avoids classical fiqh jargon	Highest passive ratio (0.21) and complexity (18.48) — dense, agency-obscuring prose; 91% positive sentiment masks contestation
DeepSeek V4 Pro	Legal-doctrinal with reformist-Maliki narrative; hudud-vs-rights reconciliation as core topic	Most concrete punishment lexicon (death penalty 79; for_apostasy 44); distinctive istitāba/repent framing as exit path	Highest negative sentiment (17%) — appropriate for punishment themes but flags dark-framing; shari’a OVER while "justice" UNDER
Grok 4.3	Active-voice ethicist: direct declarative claims; zero negative chunks	Most active prose (passive ratio 0.03); dedicated humanistic-sharia-scholarship topic (29%); gender justice split across two topics (~23%)	Near-zero intensifiers but 512 loaded terms — confident assertions without qualification; 99% positive sentiment is a homogenization red flag
Claude Opus 4.7	Contextual-pluralist, most critical and least biased; fiqh-literate (fiqh top-5 noun)	Best balance of hedging (140) vs loaded terms (198); cleanest separation of apostasy vs blasphemy legal distinctions; UDHR-instrument citations	Smallest corpus (100 chunks, 13.1%) limits statistical weight; 73% single macro-topic concentration

Common ground across all five models:

(1) Apostasy & blasphemy remain the central battleground; (2) maqāṣid al-sharia bridges to human-rights language everywhere; (3) UDHR/Cairo Declaration are universal reference points (all five n-gram profiles share "declaration of human (rights)"); (4) positive sentiment dominates every model (77-99%) while the corpus average is only 0.21 — the tone lives in topic choice, not polarity; (5) negative drivers are consistent (punishment, death, penalty); (6) keyness signatures are stable across re-runs: identical OVER/UNDER patterns to the earlier 108-page run confirm these are model-level stylistic traits, not sampling noise.

Source: Analysis_Report_ai-humanistic-reinterpretation-of-sharia_model-5-groups-filtered_2026-10-05.pdf (171 pp., Analysis ID 01a10bd9, generated Oct 5 2026) — GitHub project Etinanwar/AI-humanistic-reinterpretation-of-sharia. Same corpus as the earlier 108-page report (ID 01a095d6 → re-run 01a10bd9) but with the full feature set. Topic labels were LLM-generated (gpt-5.6-luna); all statistics are quoted from the report’s deterministic sections without independent re-computation.
